

BY HAYWARD TAYLOR.

The fisherman wades in the surf... The soldier steps bravely to the aid... The woodman lays aside the tree...

Each prodigal life that is wasted... In many achievements unseen... But lengths the days of the onward...

In summer, a little heap of flowers... In winter, a bed of snow... Of the promise perished long ago...

ADDRESS BY REV. SAMUEL J. NICCOLLS.

Delivered at Chambersburg, May 22, 1863, before the 125th Regiment of Pennsylvania Volunteers.

FELLOW CITIZENS—It is custom alone which makes words necessary upon this occasion... The gathered multitude proclaim...

Be ye comrades! I salute you; and while I thank my fellow citizens that we have thought me worthy to be their representative on this occasion...

When the mailed legions of Rome returned from their wars of conquest and rapine, the imperial city became desolate and wild...

When the mailed legions of Rome returned from their wars of conquest and rapine, the imperial city became desolate and wild... But it is not for our glory that we welcome you...

When the mailed legions of Rome returned from their wars of conquest and rapine, the imperial city became desolate and wild... But it is not for our glory that we welcome you...

with that chivalry of the dark ages which delights in the bloody trade of arms; but it is as the soldier of his country...

Our hearts are filled with gratitude to God that so many of you have been permitted to return to us for such lives as you can but illly be spared in times like the present...

But you are not all here, and this thought comes like a cloud across the brilliant sky to remind us that perfect joy does not belong to earth...

But there are none so base as those among us. All join in welcoming the returning soldiers of our country. Venerable age and blushing beauty, youth and manhood...

My COUNTRYMEN—It was in Rome that you were welcomed to return with legions that had your youth, intrepid with the scene and fired with a love...

There have been times when citizens at home looked with apprehension and dread for the return of their armies from the wars. Hardened by rapine, inflamed with lust...

This address is not the welcome we expected to give you. We had hoped with your return to be the signal of peace...

It is not for our glory that we welcome you. It is not for our glory that we welcome you. It is not for our glory that we welcome you...

right from the stern arbitrament of sword and lance. It is the honor of our country that we should be permitted to do so...

The Commissioner of Internal Revenue has just made the following highly important decision, covering the whole ground of the income tax...

Income derived from coal mines will be returned, although tax has been previously paid on coal produced. No deduction will be allowed for the cost of the coal...

Interest on borrowed capital used in business may be deducted from income. The Commissioner of Internal Revenue has just made the following highly important decision...

Interest on borrowed capital used in business may be deducted from income. The Commissioner of Internal Revenue has just made the following highly important decision...

Franklin Repository.

A WORD TO FARMERS.

It is a grave fault of our Farmers in Franklin county that they do not interchange views more through the medium of the local press on matters relating to Agricultural progress. It has hitherto been very rare to find a communication in any of our papers from practical farmers, on the practical results of experiments in the different branches of farming. Indeed we do not now remember of any such articles within several years, and it is not creditable to our farmers that such is the fact. We have in Franklin county as thrifty, as intelligent and as successful farmers as a class, as can be found in any part of Pennsylvania; but they are far from keeping pace with the age of progress as manifested in almost every other branch of industry around them. True they keep up with the improvements in Agricultural implements; but that is a necessity resulting from the growing scarcity of labor. And we doubt not that they read as much on the subject of farming as the average of farmers in other portions of the State; and make experiments based upon suggestions thus obtained; but without a free interchange of views and results, all efforts at progress must be necessarily circumscribed in the many instances utterly abortive.

There are many farmers who will readily contribute to the political columns of their local papers to advance the claims of some ambitious candidate, and will spend days and nights in promoting political movements. All this is very well; indeed commendable in its place; but to the great pursuit of their lives—to the growing industrial interest of our rich and growing county, they will give their labor mechanically, without any systematic effort at substantial progress. This is an error of no common magnitude, and should be promptly remedied. Every farmer who makes a step of advancement in Agriculture should communicate with others through the press, and receive in return the results of similar experiments made by his neighbors. By such an interchange of views in valuable advantages must result to our entire farming community. Of course, there are block-heads and bigots in every clannish industry who will learn who discard progress and offer a contempt for everything designed to increase the products of our lands by any process unknown to their fathers; but such men are fast fading away before the lights which are flooding us from the eminent intellects and sound practical minds devoted to the elucidation of cause and effect in the growth of crops.

There is no excuse for farmers being ignorant of the general principles which govern in the production of different crops from different soils. It needs no elaborate cultivation—no vast number of volumes and patient research to master the causes which produce the results passing under our observation daily. It does, however, require the exercise of a rational mind, and the gathering of the multitude of facts floating by us through newspapers and other sources, and the practical test of such ideas. This is within the range of our farmers as a class, and they have but to employ their intelligence with half the fidelity to their pursuit that they employ their hands, and they will yearly become more and more masters of their calling. To this end we entreat our farmers of Franklin county to contribute their views and experiments to the columns of the Repository. They will be ever welcome, and when in our power to aid them in the investigation of any subject, it will be freely given. It does not require a man to be a master of grammar or thoroughly versed in Webster to write a practical article for a newspaper. What is needed is the result of effort made by farmers to hasten the reclamation of land; to increase the products of crops; to improve the breed of stock; to diminish the cost of tilling the soil with a fair measure of success, &c. These efforts will be but a slight tax upon our intelligent farmers, while the results to the farming community at large will be invaluable.

Our publishing houses abound with books on every subject pertaining to Agriculture, and they cannot be read too widely; it must, be remembered that all the theories of educated men are studied, the practical, experienced, intelligent and observing farmer wanted to give substantial success to farming. In two years past the editor of this paper has given a liberal share of his time to the study of the standard authorities on the different branches of Agriculture. We have found them in many respects invaluable; but we have often learned a half-hour's talk with an experienced farmer what we had sought vainly to learn from the theoretical writing, and so it is with hundreds of others who must await the accident of time to acquire important practical information which, like most other things, is exceedingly simple when it is understood. We hope to give these columns articles from some of the ablest writers on Agriculture in the State; but we especially desire of our Franklin county farmers to contribute their views and theories briefly on any and every branch of the subject, and thus supply of other wants by mutual counsel and mutual improvement.

Mr. Black is a gentleman of high character, and we commend his efforts to the favor of our readers. We have never seen his peculiar power, but have thus spoken of the general advantages of the paper.

too widely; it must, be remembered that all the theories of educated men are studied, the practical, experienced, intelligent and observing farmer wanted to give substantial success to farming. How to make Good Butter.
In the report of the Committee on Butter of the Franklin Co. (Mass.) Ag. Society, the following directions are given for making good butter:
To make the best butter, require many pre-requisites; but for all practical purposes, to main points cover the whole ground, viz: 1st. Nest-ness; 2d. Skill. If any dairy-woman expects to make nice butter without the most scrupulous neatness, she will find herself greatly disappointed. From the moment when the rich and viscous fluid first drawn from the cow's udder, at the time when the butter is ready for the table of the connoisseur, or for the least use, it is up to the eye in the atmosphere of the room, and the least speck of foreign matter of any kind, must be absolutely and perfectly kept out, during all its stages of manufacture. In fact, neatness is the *raison d'être* of the butter-maker's art. As well may we suppose that any of the laws that regulate the physical world will be reversed, as to suppose that good butter can be made without the most scrupulous neatness in every particular.
The second indispensable qualification of the perfect butter-maker, is SKILL—a word of quite extensive signification when applied to this subject. To acquire that skill requires a clear and discriminating judgment, a well educated and experienced mind, and a minute and accurate observance of the physical laws which regulate the various conditions of the milk and the cream, while undergoing the transformation into butter. To be a successful butter-maker, therefore, requires no considerable degree of education, intellect and ingenuity. Let us, then, analyze this skill of butter manufacture, and see what are its most important elements.

First, then, to analyze this skill of butter manufacture, and see what are its most important elements. To begin then, we must have good milk, and to have good milk, we must have good cows, and to have good cows, requires a selection of the best breeds, out of the best milkers from the best breeds for that purpose. But that carries us into another department of agriculture, which we have no time here to discuss.

Assuming, then, that we have good milk, the next thing is to place it in shallow pans, (tin is usually preferred), and in degree of temperature either warm or very cold. About 62 degrees of Fahrenheit is supposed to be the state of the air in which cream from the best breeds for that purpose. But that carries us into another department of agriculture, which we have no time here to discuss.

figures, is the most beautiful, and seemingly adds to the flavor of the article. The best hay to be put up is about one year's growth of about four pieces.

Such is the main requisite of the skillful manufacturer of good butter, without which we venture to assert with great confidence, that the best of our dairymen are but empirics.

Obey any good housewife, who has read this report, say, "I know better." We ask her with no small degree of assurance, "Madam, do you practice all these things in making good butter? If you do, why is it that so large a proportion of the butter that is sent to market is so poor?"
HENRY W. COLEMAN, Chairman.

SCIENCE HAS NOT YET ENABLED MAN to provide himself with good weather, the succession of the seasons, seed time and harvest, are guaranteed by the Almighty Ruler, yet they are not alike propitious to all localities. At times the North is blasted with uninvited frosts, while the South is fervid with sunshine; the East may be parched with drought while the West is rejoicing in refreshing showers. But the cultivator may do something to provide himself against such vicissitudes. If by a mixed husbandry, if corn be sown in the season of drought, the grass in meadow and pasture will grow up undiminished luxuriance, and what is lost in the plow field may be found in the cattle yard and the hay mow. He who depends upon wheat alone may grow rich if the showers of Winter and the rains of Summer are propitious, but he may also lose all when the seasons change their aspect, and are unfavorable. Thousands have paid a heavy price for the experience by which this lesson has been learned, and no longer trust to a single crop.

Drainage is a most efficient regulator by which to counterbalance in some measure the effect of wayward seasons. If there be too great a rainfall, the water speedily finds an outlet from the soil, which it would otherwise do. If drought occur, the porous soil is enabled to draw moisture from beneath, and also condense it from the air which can enter from above. Corn on a well drained field will pass safely through a soak or a drought which would diminish by one-third, the yield from an undrained compact soil. Frequent stirring of the soil, keeping it loose and light, is of paramount importance, especially in planting. If drought occur, the porous soil is enabled to draw moisture from beneath, and also condense it from the air which can enter from above.

It is less easy to keep grass lands in heart during drought, and other means should be resorted to where the stock of cattle is large, and the amount of pasture and meadow only just sufficient to carry them through a favorable season. A field of corn in doubt should be sown the present month, to be cut and fed green in August and September. The latter plant resists drought even better than corn, and a new yield a supply for several heads of cattle during the period when droughts are most frequently injurious to pastures. There need be no loss, if the crop be not wanted to supply Summer deficiency.

A feed from the sowing patch at night will make itself felt in the milk paid on the morning, and what cannot be profitably used in this manner can be cured and used to advantage in Winter. There is always less difficulty in disposing of superabundance of feed, than in eluding out a short supply, and the wise husbandman will endeavor to err on the safe side, if at all.

The clovers are justly considered as among the best and most valuable of the cultivated grasses. Yet giving to an error in cutting and curing them, a very considerable portion of the rich nutritive matter they contain is lost. I have now a mow of red clover sparsely intermixed with clover, red-top and herds grass, which was cut when the honey-suckle was in full bloom, and made in goodcock, according to the rules laid down some time since in the columns of your paper for curing this kind of hay. I must say that although I had not much faith in the matter at first, the result has fully proved the correctness of the writer's views, and that I no longer doubt the theory upon which the practice is based.

If clover is cut when in bloom, and permitted to remain undisturbed in the stack till the season of the reed is past, and then turned, covering the under and inverted side to the sun for a few hours, and then pitched carefully into cocks of sixty pounds weight, cured hay, and there allowed

to stand till cured, the hay will be heavier, brighter, of better flavor, and possess a far greater nutritive value than hay of the same kind made in the ordinary manner. The leaves and fine heads, which are inevitably lost by drying in the ordinary way, in consequence of their brittleness when dried, and in this way preserved. The flavor of the hay is also vastly superior. One ton of good clover made in this way, is worth, for feeding, two tons dried in the ordinary way, and deprived by turning, spreading and drying, of its leaves and heads. The fermentation which it undergoes in the cock is never sufficient vigorous to dissipate any of the alimentary properties, and it is rarely sufficient to be perceptible by the hand. That the heat is very moderate is sufficiently attested by the fact that the color, not only of the foliage, which is naturally of a deep and vivid green, but the bright crimson spots in the leaves, are retained, which would not be the case were the fermentation as vigorous as many would lead us to believe. Any grass cured in this way will be more nutritive, of better color and greater weight than the same grass made in the ordinary way.

Franklin Repository

Published weekly at Gettysburg, Pa., July 4, 1863.

The Franklin Repository will be published by Messrs. K. Mc... It has been enlarged to its old size...

The assistance has been secured in the editorial department, and the best items of the county will be given in the fullest possible manner.

Politically, the FRANKLIN REPOSITORY, will, during the war, have but one article of faith—the positive and unconditional restoration of the Union under the regularly constituted authorities of the Government.

At length the two great opposing armies have met in an open field with the firm resolve to conquer or be destroyed, and the God of battles has given victory to the Union arms.

Under cover of the night their shattered legions commenced their retreat, hugging the mountains closely for protection...

Our next issue we shall give in detail the movements of the rebels while in our county, and the prominent incidents which occurred during their stay...

Friday, and as the Potomac is impassable, the historic ground of Antietam will doubtless be chosen again by the rebel leader for the last desperate effort for existence. It was there that he learned the bitter lesson of the madness of invasion nearly one year ago, when a defeated, disorganized army assailed and dislodged him.

The plundered Border of Pennsylvania sends greetings to the authorities and noble sons of New York, who were first upon our soil to resist the relentless desolation of the despoiler.

The Democratic State Convention met at Harrisburg on the 17th ult., and nominated Hon. George W. Woodward, of Luzerne, for Governor, and Hon. Walter H. Lowrie, Jr. for Supreme Judge.

The publisher of the Repository has been suspended for two weeks by the suspension of the Cumberland Valley by the rebels. The issue of today's paper was published on the 29th and 30th ult.

Our next issue we shall give in detail the movements of the rebels while in our county, and the prominent incidents which occurred during their stay...

A GREAT VICTORY

THREE DAYS BATTLE

Terrific and Unparalleled Combat

THE REBELS UTTERLY ROUTED! They Retreat to the Mountain.

The Culminating Battle on Friday.

OFFICIAL DISPATCHES FROM GEN. MEADE.

The Rebels Repulsed in Every Attack!

THE PRESIDENT CONGRATULATES THE COUNTRY.

SPLENDID CONDUCT OF OUR MEN.

The Rebel Gen. Arms-tread Captured.

GEN. SHOOK'S LEG AMPUTATED ON THE FIELD.

SOME OF THE RESULTS OF THE GREAT VICTORY.

The Rebel Ponton Bridges at Williamsport Destroyed.

RISE OF THE POTOMAC RIVER.

HEADQUARTERS, THIRD ARMY CORPS, NEAR GETTYSBURG, July 4, 1863.

The battle of Friday was the most desperate, most fierce and decisive of the war. It was commenced at early dawn on our front by a determined attack by the enemy with musketry and artillery. The attack was met by the Sixth Corps and portions of the First and Third.

The fight raged here on the face of a lofty mountain, densely wooded, from the summit of which over and over again we directed our fire upon the rebels who were attacking our position on Cemetery Hill. It was evidently with a view of gaining this position that the enemy made the assault.

The battle of Friday was the most desperate, most fierce and decisive of the war. It was commenced at early dawn on our front by a determined attack by the enemy with musketry and artillery.

The battle of Friday was the most desperate, most fierce and decisive of the war. It was commenced at early dawn on our front by a determined attack by the enemy with musketry and artillery.

The morning opened clear and bright, but the sun did not appear until ten o'clock. The rebels were taken into the army's front on Wednesday. At early dawn on Thursday they commenced their attack.

My capture from the rebels of the morning papers, which I now possess, contains some interesting news, including one which they have taken from me, containing some interesting news.
